Summary

Full-stack Java enterprise developer with 25+ years building secure, large-scale systems for federal healthcare and financial services. Deep backend expertise in Spring Boot, Hibernate/JPA, Oracle, and DB2; frontend experience in JSP and JavaScript across the full development lifecycle. AWS Developer certified (2026), focused on modernizing enterprise Java applications for cloud deployment. Brings a combination of deep legacy system knowledge, financial and federal compliance experience, and current cloud architecture skills—ideal for teams modernizing mission-critical applications.

Certifications

AWS Certified Developer – Associate (DVA-C02) • Issued April 2026 • Credential ID:
ea7928eeb9c44ae79bca7fb42c0e9cbe

Technical Skills

Languages: Java, Kotlin, Python, JavaScript, SQL, C/C++, CUDA, PHP, Perl, Natural, COBOL

Frameworks: Angular, Spring Boot, Spring MVC, Spring Security, Spring Batch, Hibernate, JPA, RESTful APIs

Frontend: JSP, JavaScript, jQuery, Bootstrap, Thymeleaf, HTML, AJAX, JSF

Cloud & DevOps: AWS (Lambda, CloudFormation, Elastic Beanstalk, S3, EC2, serverless Valkey), Docker, Kubernetes, CI/CD, Jenkins, Git, GitHub Actions, Maven, Checkmarx, YAML

Databases: Oracle, IBM DB2, MySQL, SQL Server, PostgreSQL (including PostGIS and PGVector extensions), MongoDB

Security: MFA / TOTP (RFC-based implementation), Active Directory integration, FIPS 140-2 encryption, OFAC sanctions screening, OWASP, OAuth2

Tools & Other: JIRA, JUnit, JSON/XML, Web Services (SOAP/REST), SFTP/FTPS, Eclipse, JDeveloper, Android Studio, Visual Studio

Generative AI: Claude Code (development, debugging, AWS troubleshooting); RAG/vector search implementation (personal project)

Experience

Web Developer III (Full Stack), Carelon Federal Services — Jan 2012 – Feb 2026

Lead full-stack developer for Military One Source (MOS), a federal platform serving 3M+ users seeking mental health and insurance claim services.

- Developed Federal OutreachConnect, a full-stack Spring Boot system using Spring Security (Active Directory integration), Hibernate, and JPA, with JSP and JavaScript frontend.
- Wrote a Multi-Factor Authentication (MFA) library implementing the TOTP algorithm directly from RFC specification, eliminating third-party framework licensing for this component.
- Designed and implemented automated batch processes built with Spring Batch generating JSON data feeds, daily PDF/Excel reports, product order/shipper integrations, and secure SFTP/FTPS delivery of database extracts.
- Participated in lift-and-shift effort to migrate applications into IL-4 GovCloud environment, working through FedRAMP control implementation and compliance requirements.
- Independently led a high-risk migration of document storage from IBM OnDemand to an in-house Vault system with no fallback path once committed; completed without data loss, eliminating several million dollars in ongoing licensing costs.
- Built and maintained CI/CD build and deployment pipelines in Jenkins from the project's outset, eliminating manual release steps; supported code security scans with Checkmarx.
- Authored and executed a Disaster Recovery Plan including live production failover tests.

Senior Software Developer, METHODS Technology Solutions, Inc. — Nov 2008 – Dec 2011

- Re-architected the Louisiana Racing Commission system, migrating from client-server to a web-based platform for improved accessibility and scalability.
- Developed Hart, a hybrid home healthcare management tool integrating a web-based interface and offline Java Swing client with an embedded encrypted database for secure data management.
- Developed ClaimBridge, a Medicare/Medicaid claims submission tool, ensuring compliance, quality assurance, and audit readiness.
- Delivered a complete greenfield Java/DB2 replacement for a scholarship and educational grant system (LOSFA TOPs), building entirely from client requirements; participated in requirements workshops with clients, and worked on DB2 database design.

Software Developer II / Java Developer, CACI / Eventure Technologies — Oct 2003 – Nov 2008

- Converted Oracle PL/SQL stored procedures to Java-based logic.
- Developed a reporting engine to produce PDF and Excel spreadsheets based on Jasper Reports.
- Enhanced NROWS system with admin interfaces (Java Servlets/JDBC) and Struts/TopLink integration.
- Built reporting engine for MRRS system with PDF/Excel output via Jasper Reports.
- Built FIPS 140-2 compliant data-at-rest encryption interface for Oracle Lite using Crypto++
- Designed and built an automated tool for exchanging digitally signed XML over HTTPS.

Programmer/Analyst I, Whitney National Bank — Aug 1999 – Oct 2003

- Performed enhancement and maintenance on the bank's production wire transfer system (COBOL II, CICS, AIX, OpenVMS), including OFAC sanctions list screening to flag and prevent transfers to prohibited entities.
- Built several applications from scratch to automate account reconciliation, and automated secure file transmission for reconciliation processes using Python and PGP encryption.
- Maintained the core infrastructure and circular databases for the IntraNet MTS banking engine (now ACI), ensuring high availability for high-volume money transfers. Managed Disaster Recovery (DR) testing that achieved sub-second system switchovers, supported by an architecture that synchronously wrote transactions to both environments before each commit to eliminate data loss. Also handled the daily ingestion of OFAC compliance files into the live runtime to ensure real-time transaction screening never lagged.
- Maintained and provided user support for PegaSystems applications running on OS/390, and Windows; Maintained fax servers running UNIX and Windows that interfaced with both RS/6000 and VAX computers

Programmer/Analyst, U.S. Marine Corps — Mar 1990 – Jun 1994

- Designed, implemented, and maintained new and existing PC-based integrated software applications using dBase and Quicksilver; Database maintenance for the central Moral, Welfare and Recreation office in Okinawa, Japan; Developed a multiuser LAN based airline ticketing system.
- Developed and implemented a prototype system in COBOL/CICS for online updating of central manpower and financial tables used Marine Corps-wide; awarded the Navy Achievement Medal for innovation.
- Produced reports and queries using Natural and ADABAS on an as requested basis.

Graduate Security Research

Master's Thesis Research, Computer Science — 2015

Implemented a proof-of-concept Windows kernel mode driver exploiting Direct Memory Access (DMA) to locate and monitor the system keystroke buffer without CPU involvement, bypassing contemporary anti-malware software. Captured keystrokes were encrypted and exfiltrated to a remote system entirely from GPU memory. Developed a companion detection tool using the PCI bus to inspect video card memory from a CPU-bound process, exposing GPU-resident malware with identified performance mitigations. Degree not completed due to a family medical emergency.

Education

B.S., Computer Science (Minor in Accounting) • University of New Orleans
Certificate, COBOL Programming • Computer Sciences School, Quantico, VA
